

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion, from 1.1 billion in 1980 to 2.3 billion in 1999. The number of people aged 15 years and over has increased by 1.5 billion, from 1.9 billion in 1980 to 3.4 billion in 1999.

There are a number of factors that have contributed to this increase in the world population. One of the main factors is the increase in life expectancy. In 1980, the average life expectancy at birth was 47 years. By 1999, it had increased to 71 years.

Another factor is the increase in the number of children born to women. In 1980, the average woman had 5.1 children. By 1999, the average woman had 2.7 children. This is due to a number of factors, including the increase in the age at which women have children, and the increase in the number of children born to women who are already mothers.

The increase in the world population has a number of implications. One of the main implications is the increase in the demand for resources. As the world population increases, the demand for food, water, and energy increases. This can lead to a number of problems, including food shortages, water shortages, and energy shortages.

Another implication is the increase in the demand for housing. As the world population increases, the demand for housing increases. This can lead to a number of problems, including overcrowding, slums, and homelessness.

The increase in the world population also has implications for the environment. As the world population increases, the demand for resources increases. This can lead to a number of problems, including deforestation, desertification, and global warming.

There are a number of ways in which the world population can be managed. One way is to increase the age at which women have children. This can be done by providing education and family planning services to women.

Another way is to increase the number of children born to women who are already mothers. This can be done by providing education and family planning services to women.

The increase in the world population is a major challenge for the world. It is a challenge that requires the attention of all countries. We must work together to find ways to manage the world population and to ensure a better future for all.
